Experiment 7: JDBC-Based CRUD Operations with Transaction Handling

Aim

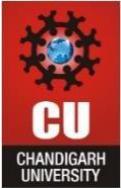

To build a Java program that performs CRUD (Create, Read, Update, Delete) operations on a MySQL database table named **Product**, using JDBC with proper transaction handling to ensure data integrity.

Objectives

- Create a **Product** table in MySQL with columns: ProductID, ProductName, Price, and Quantity.
- Establish a **JDBC connection** between Java and MySQL.
- Implement **menu-driven CRUD operations** (Add, View, Update, Delete).
- Use **PreparedStatement** to prevent SQL injection.
- Implement **transaction handling** using commit() and rollback().
- Close all JDBC resources properly in the finally block.

Code Implementation

```
import java.sql.*;  
import java.util.Scanner;  
  
public class ProductCRUD {  
    private static final String URL = "jdbc:mysql://localhost:3306/your_database_name";  
    private static final String USER = "root";  
    private static final String PASSWORD = "your_password";  
  
    public static void main(String[] args) {  
        Connection conn = null;  
        Scanner sc = new Scanner(System.in);  
  
        try {  
            // Step 1: Establish connection  
            conn = DriverManager.getConnection(URL, USER, PASSWORD);  
            conn.setAutoCommit(false); // Transaction Handling  
  
            while (true) {  
                System.out.println("\n--- Product Management Menu ---");  
                System.out.println("1. Add Product");  
                System.out.println("2. View All Products");  
                System.out.println("3. Update Product");  
                System.out.println("4. Delete Product");  
                System.out.println("5. Exit");  
                System.out.print("Enter your choice: ");  
                int choice = sc.nextInt();  
                if (choice == 1) {  
                    addProduct(conn);  
                } else if (choice == 2) {  
                    viewProducts(conn);  
                } else if (choice == 3) {  
                    updateProduct(conn);  
                } else if (choice == 4) {  
                    deleteProduct(conn);  
                } else if (choice == 5) {  
                    System.out.println("Exiting...");  
                    break;  
                } else {  
                    System.out.println("Invalid choice");  
                }  
            }  
        } catch (SQLException e) {  
            e.printStackTrace();  
        } finally {  
            if (conn != null) {  
                try {  
                    conn.close();  
                } catch (SQLException e) {  
                    e.printStackTrace();  
                }  
            }  
        }  
    }  
}  
  
// Methods for CRUD operations  
private void addProduct(Connection conn) {  
    // Implementation  
}

    if (rows > 0) {
        conn.commit();
        System.out.println("Product deleted successfully!");
    } else {
        System.out.println("Product not found!");
    }

} catch (Exception e) {
try {
    conn.rollback();
}
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
System.out.println("Transaction rolled back due to an error.");
} catch (SQLException ex) {
ex.printStackTrace();

}
}
}
}
```

Output

```
--- Product Management Menu ---
1. Add Product
2. View All Products
3. Update Product
4. Delete Product
5. Exit
Enter your choice: 1
Enter Product Name: Laptop
Enter Price: 80000
Enter Quantity: 10
Product added successfully!
```

Learning Outcomes

- Understood how to connect Java with MySQL using **JDBC API**.
- Learned to perform **CRUD operations** using PreparedStatement.
- Implemented **transaction management** using commit() and rollback().
- Ensured **data integrity** and prevented **SQL injection**.
- Gained experience in writing **menu-driven console applications** with JDBC.
